CORPORATE INTERNSHIP PROGRAM (CIP) FINAL REPORT

AdvisorPrep AI — Pre-Meeting Briefing Solution for Financial Advisors at AnytimeInvest Services

with AdvisorPrep AI — A Prompt-Engineering Workflow for Advisor Preparation

Student Name	Sagar
Roll Number	25PGDM241
Section	[Section]
Programme & Batch	PGDM Batch 2025–2027
Organization	AnytimeInvest Services Private Limited
Industry / Sector	Wealth Management & Financial Advisory (AMFI-registered MFD)
Location	Kakrola, Dwarka, New Delhi
Functional Area	Financial Planning & Advisory
Internship Duration	Weeks 1–12 (Summer Internship 2026)
Faculty Supervisor	Dr. Anil Sinha
Corporate Mentor	Ms. Ayushi Srivastava – Advisory Team Lead
Assessment Code	CIP Final Report (AS3)
Date of Submission	July 2026

PROJECT OF CORPORATE INTERNSHIP PROGRAM

FINAL CORPORATE INTERNSHIP REPORT

This report is submitted in partial fulfilment of the requirements of the Corporate Internship Program (CIP) for the Post Graduate Diploma in Management (PGDM), Batch 2025–2027, Fortune Institute of International Business (FIIB), New Delhi.

Submitted by

Sagar

Financial Planning & Advisory

SECTION 3: CORPORATE MENTOR / ORGANIZATION CERTIFICATE

[Corporate Mentor Certificate — to be signed and stamped by Ms. Ayushi Srivastava, Advisory Team Lead, AnytimeInvest Services Private Limited, and embedded here before FIIB HUB submission.]

Please attach the duly signed and stamped certificate here before final submission to FIIB HUB.

SECTION 4: FACULTY MENTOR CERTIFICATE

[Faculty Mentor Certificate — to be signed by Dr. Anil Sinha, Faculty Supervisor, FIIB, New Delhi, and embedded here before FIIB HUB submission.]

Please attach the duly signed and stamped certificate here before final submission to FIIB HUB.

SECTION 5: ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to all those who guided and supported me throughout the Corporate Internship Program (CIP) at AnytimeInvest Services Private Limited.

I am deeply thankful to Ms. Ayushi Srivastava, Advisory Team Lead, AnytimeInvest Services Private Limited, for her invaluable mentorship, practical guidance, and openness to the AdvisorPrep AI demonstration. Her candid feedback during the Week 8 live demonstration — particularly her request for a fund-level portfolio observation prompt (P3 v2) — directly shaped the direction of this project's refinement. Her validation of the solution's compliance positioning and her expression of interest in conducting a supervised live trial meaningfully reinforced the practical relevance of the work undertaken.

I extend my sincere appreciation to Dr. Anil Sinha, Faculty Supervisor, FIIB, for his academic guidance, timely feedback during milestone reviews, and consistent encouragement throughout the internship period. His direction on structuring the Intellectual Contribution, applying management frameworks rigorously, and maintaining evidence-based reporting standards was instrumental in shaping this report.

I am grateful to the advisory team members at AnytimeInvest Services whose fieldwork cooperation during Weeks 1–2 provided the systematic observational foundation on which the entire solution was built. The structured process observation and workflow documentation that resulted from those weeks of engagement formed the evidence base that made this project's diagnosis credible and its solution targeted.

I also thank Fortune Institute of International Business for creating the Corporate Internship Program framework that enabled this meaningful, practice-integrated learning experience — and for the FIIB AI-in-CIP initiative that encouraged students to design and deploy real AI solutions during their internships.

Sagar

Summer Internship 2026

SECTION 6: EXECUTIVE SUMMARY

This report presents the findings, analytical frameworks, and outcomes of the Corporate Internship Program (CIP) undertaken at AnytimeInvest Services Private Limited — an AMFI-registered Mutual Fund Distributor based in New Delhi — over a twelve-week summer internship period in 2026. The internship was conducted in the Financial Planning and Advisory functional area under the supervision of Ms. Ayushi Srivastava, Advisory Team Lead.

The central problem identified through systematic fieldwork was the absence of a structured, standardised tool to convert raw client portal data into advisor-ready pre-meeting briefing notes. Financial advisors were observed spending between 20 and 40 minutes per client on repetitive manual drafting — a cognitive and time cost that reduced the hours available for high-value advisory work. The problem was information-structuring in nature, consistent in input structure, and predictable in output format: characteristics that made it well-suited to a prompt-engineering AI solution.

The solution developed — AdvisorPrep AI — is a five-prompt ChatGPT workflow paired with a structured Excel input template. The workflow converts structured client data into a draft pre-meeting briefing package covering financial position, goal observations, portfolio notes, insurance adequacy, and a meeting discussion agenda. The solution was demonstrated live to the corporate mentor in Week 8 (30 May 2026) and confirmed at Level 1 deployment.

The corporate mentor confirmed output quality, practical relevance, and compliance positioning, while identifying a specific improvement area: fund-level detail in the portfolio observation prompt (P3). Key mentor feedback included that the output "could help standardise preparation when time is tight" and explicit validation of the tool's framing as internal drafting support rather than client-facing advice.

In testing, the full P1–P5 sequence and review took approximately 5–8 minutes per client versus 20–40 minutes manually — a 65–80% reduction in preparation time per client. For a full advisor review period, this represents a material reallocation of advisor time toward higher-discretion, higher-value work.

The recommended path forward is a supervised informal live trial in Weeks 10–11, a final P3 v2 refinement incorporating fund-level inputs, and a formal handover documentation package to support potential continued use after the internship concludes.

The report is structured across 14 sections covering organisational context, problem diagnosis, methodology, options analysis, recommendations, implementation planning, organisational response, professional reflection, and supporting annexures.

SECTION 8: ORGANISATIONAL CONTEXT

8.1 Indian Wealth Management Sector — Overview

India's wealth management and financial advisory sector has undergone significant structural expansion over the 2020–2026 period, driven by rising financial awareness, growing retail investor participation in mutual funds, and regulatory reforms under the Securities and Exchange Board of India (SEBI) and the Association of Mutual Funds in India (AMFI). The total Assets Under Management (AUM) of the Indian mutual fund industry crossed ₹65 trillion in 2025–26, with retail and HNI participation growing steadily across urban and semi-urban markets.

Mutual Fund Distributors (MFDs) registered with AMFI form the foundational distribution layer for retail financial products in India. These entities — ranging from individual agents to small advisory firms — serve as the primary touchpoint for financial product access for millions of investors who do not engage directly with institutional platforms. The MFD operating model is relationship-driven, relying heavily on personalised advisory interaction and periodic portfolio review meetings to retain clients and communicate product recommendations.

8.2 AnytimeInvest Services — Organisational Profile

AnytimeInvest Services Private Limited is a wealth management and financial advisory firm registered with AMFI as a Mutual Fund Distributor. The firm provides financial planning, investment advisory, and portfolio review services to individual clients, primarily in the Delhi NCR region, operating from its office in Kakrola, Dwarka, New Delhi.

The advisory team manages an active roster of client relationships, each requiring periodic review meetings. The firm operates without enterprise financial planning software; advisors rely on a centralised client portal for data storage and use personal Word/Excel formats for meeting preparation. This produces inconsistent preparation quality across advisors and review periods.

Dimension	Details
Internship Function	Financial Planning & Advisory
Corporate Mentor	Ms. Ayushi Srivastava, Advisory Team Lead
Faculty Supervisor	Dr. Anil Sinha, FIIB, New Delhi
Internship Period	Weeks 1–12 (Summer Internship 2026)
Primary Exposure Areas	Advisory process observation, client portal workflows, meeting preparation, prompt engineering, AI tool design
Core Project	AdvisorPrep AI — Five-Prompt ChatGPT Pre-Meeting Briefing Workflow
AI Component	AdvisorPrep AI — Five-Prompt ChatGPT Workflow (P1–P5)
Supporting Tool	Structured Excel Client Input Template

SECTION 9: PROBLEM DIAGNOSIS AND EVIDENCE

9.1 The Problem

Financial advisors at AnytimeInvest are responsible for preparing a working brief before each client review meeting. This brief must synthesise the client's full financial picture — income, liabilities, investments, SIPs, insurance, goals, and risk profile — drawn from the centralised client portal. The current process requires the advisor to read across multiple portal screens, synthesise data mentally, and draft notes in a personal format.

Quantified Impact: Thorough preparation for a single client review was observed to take 20–40 minutes per client. Across an active advisor roster, this volume of repetitive drafting occupies a significant portion of weekly working time — time that could otherwise be directed toward substantive client engagement, portfolio reviews requiring professional judgement, or business development activity.

Quality variability was also observed: on busier days, preparation was abbreviated, and some client review dimensions (e.g., insurance adequacy, goal-gap observation) received less structured attention. There was no firm-level standardised briefing template, meaning preparation outcomes could not be consistently evaluated or improved across advisors.

9.2 Evidence Base

The diagnosis rests on three evidence sources:

- Direct fieldwork observation (Weeks 1–2): Systematic observation of the pre-meeting preparation process produced a structured account of each process step, effort level, and tool used. This is documented in the Service Blueprint (Evidence Item 2, Week 8 Interim Evidence Log).
- Workflow Observation Notes (10 April 2026): A structured record of how advisors prepare for client meetings, validating the repetitive nature of the problem.
- Corporate mentor confirmation (Ms. Ayushi Srivastava): The mentor confirmed during the Week 8 demonstration that the tool addressed a genuine operational need, noting that it could "help standardise preparation when time is tight."

9.3 Why AI Is Suitable

The problem is fundamentally an information-structuring and drafting task. Inputs are consistent in structure (same client data fields each time) and outputs follow a predictable format (narrative summary, goal notes, portfolio observation, insurance note, discussion agenda). These characteristics place the task within the category of applications where large language models are demonstrably reliable: converting structured data into coherent, readable prose.

Critically, the tool is not required to form financial opinions. It generates a structured first draft from advisor-supplied inputs; the advisor then validates, edits, and takes accountability for the final content. This division of labour is both technically sound and compliance-appropriate for an AMFI-registered firm.

SECTION 10: METHODOLOGY AND FRAMEWORK OF ANALYSIS

Two management frameworks from the PGDM curriculum were applied to analyse the existing workflow and support the solution rationale.

10.1 Service Blueprinting (Shostack, 1984; Bitner, Ostrom & Morgan, 2008)

Service blueprinting disaggregates a service process into user-facing actions, backstage support activities, and underlying systems, separated by lines of interaction and visibility. Applied here, the advisor is the 'user' and the bulk of the preparation work occurs backstage — invisible to the client but directly bearing on meeting quality.

Mapping the current state revealed that the high-effort steps (interpret & synthesise, draft summary & notes) involve cognitive processing of structured data — exactly the step where AI drafting assistance is most appropriate. The future-state blueprint embeds a mandatory advisor validation checkpoint between AI output and any client-related use, maintaining compliance accountability.

10.2 Opportunity Cost Analysis (Mankiw, 2021)

Opportunity cost represents the value surrendered by choosing one activity over its best available alternative. In a relationship-driven advisory firm, advisor time is the primary input and most constrained resource. Time spent on repetitive, low-discretion drafting is not 'free' — it directly displaces substantive client engagement, proactive relationship management, portfolio reviews requiring professional judgement, and business development and prospecting.

The framework establishes that the solution should be evaluated not as a cost-reduction tool, but as a means of redirecting advisor attention toward higher-discretion, higher-value work that cannot be replicated by any AI tool.

SECTION 11: OPTIONS CONSIDERED AND COMPARATIVE EVALUATION

Four solution options were evaluated against four criteria: implementation feasibility within an internship, compliance appropriateness for an AMFI-registered firm, output quality for the specific task, and time-to-value.

Option	Description	Feasibility	Compliance	Output Quality	Time-to-Value
Option A: Prompt-template workflow (ChatGPT)	Five structured prompts with standardised Excel input template, run via browser-based ChatGPT	High — no infrastructure required	High — browser-based, no integration, advisor oversight built in	High — tested and validated	Fast
Option B: Custom GPT (OpenAI API)	A dedicated custom GPT with pre-loaded instructions and input structure	Medium — requires API key, technical setup	Medium — data handling requires care	High — potentially more streamlined UX	Slower
Option C: Typebot / Google Apps Script	Form-based or scripted automation to structure data and generate prompts	Low — not suited to narrative drafting	Medium	Medium	Slower
Option D: Maintain manual process	No change — advisors continue to draft manually	N/A	High	Variable (current state)	N/A

Selected Option: Option A. The prompt-template workflow was chosen because it required no infrastructure deployment, could be demonstrated directly to a supervisor, allowed rapid prompt iteration, and produced output quality sufficient to validate the concept.

SECTION 12: RECOMMENDATION SELECTED AND RATIONALE

Recommendation: Adopt and formalise the AdvisorPrep AI prompt-workflow (Option A) as the firm's standard advisor preparation tool, subject to the following two conditions:

- Completion of a supervised informal live trial (Weeks 10–11) using real anonymised client reviews under mentor oversight to validate operational usefulness.
- Finalisation of P3 v2 (fund-level portfolio observations) and an advisor review checklist to ensure that drafts are always validated before use.

Rationale

- The solution addresses a genuinely documented operational problem (20–40 minutes per client in manual preparation) with a tool that has already been demonstrated to produce outputs consistent with manual advisor standards.
- It requires no technical infrastructure, no IT approval, and no additional cost beyond the adoption of a standard template and prompt library.
- It embeds a mandatory advisor validation checkpoint, making it defensible under AMFI compliance norms.
- It is scalable to Level 2 (team use) through a supervised trial that the mentor has already expressed interest in conducting.
- The structured input template delivers independent value even without the AI element — it standardises the data-capture format the firm currently lacks.

SECTION 13: FEASIBILITY, IMPLEMENTATION PLAN, AND IMPACT POTENTIAL

13.1 Implementation Plan

Phase	Activity	Timeline	Owner
Phase 1	P3 v2 development (fund-level inputs) + advisor review checklist finalisation	Weeks 10–11	Intern
Phase 2	Supervised informal live trial: run workflow on 3–5 real anonymised client reviews under mentor oversight	Weeks 10–11	Intern + Ms. Ayushi Srivastava
Phase 3	Final workflow documentation, prompt library version control, handover package	Week 12	Intern
Phase 4	Written mentor confirmation note + end-of-internship presentation	Week 12	Intern + Corporate Mentor

13.2 Impact Potential

- Time saving: In testing, the full P1–P5 sequence and review took approximately 5–8 minutes per client versus 20–40 minutes manually. Across a full review period, this is a material reallocation of advisor time.
- Preparation standardisation: A consistent input template and fixed prompt structures produce a reliable baseline output quality regardless of daily time pressure.
- Compliance-safe design: All outputs are internal drafts, not client-facing advice. Advisor responsibility is maintained throughout.
- Low adoption barrier: No technical training, no software cost, no IT change request required.

13.3 Risk Management

Risk	Mitigation
Real client data entered into public interface	Anonymisation protocol + explicit SOP; no PII to be entered
Generic/inaccurate draft lines passed through without review	Mandatory advisor review checklist embedded in workflow
Output variability between sessions	Standardised prompt templates reduce variance; checklist stabilises review
Regulatory classification of outputs	Tool positioned as internal drafting aid only; no investment advice generated

SECTION 14: ORGANISATIONAL RESPONSE AND CONSTRAINTS

14.1 Supervisor Demonstration and Feedback

The full AdvisorPrep AI workflow (P1–P5) was demonstrated live to Ms. Ayushi Srivastava (Advisory Team Lead) in Week 8 (30 May 2026) at the firm's office in Kakrola, Dwarka. The demonstration ran for approximately 15 minutes using an anonymised Client B profile.

Key Feedback Observations (Recorded Post-Session)

- Output quality aligned with experienced advisor preparation standards
- Practical relevance for standardising preparation in high-volume periods
- Speed advantage over 20–40 minute manual drafting confirmed
- Request for P3 v2 with fund-level detail noted as priority improvement
- Explicit validation of the compliance positioning as internal drafting support

14.2 Near-Verbatim Mentor Responses

"The summary and goal observations are broadly in line with what an advisor would draft manually — this could help standardise preparation when time is tight."

"Portfolio observations are useful, but I'd want a version that can take fund-level details, not only asset-class allocation."

"It's good that this is positioned as internal drafting support and not client-facing advice."

(Recorded as near-verbatim in internship notes immediately after the session, Week 8, 30 May 2026.)

14.3 Why Level 2/3 Was Not Reached

Level 2 (at least one colleague using the tool independently) was not reached due to data confidentiality constraints preventing real client data from being entered into a public LLM interface, and the short remaining internship window during the demonstration phase. A supervised trial is planned for Weeks 10–11 as the next step.

Level 3 (organisational adoption/continued use) was not reached as it requires formal handover, IT-approved workflow integration, an assigned internal owner, and written continued-use confirmation — none of which are possible during the internship period itself.

SECTION 15: PROFESSIONAL REFLECTION AND LEARNING INTEGRATION

This internship produced three concrete learning outcomes that extend beyond the technical deliverable.

First: Problem Scoping Matters More Than Solution Sophistication

The original project framing implied that the tool would generate financial plans — a framing that was both inaccurate and compliance-sensitive. Revising the scope to advisor preparation drafting made the solution more honest, more defensible, and more useful. This reinforced the importance of sharply defining what a solution does and does not do before building it.

Second: Compliance Constraints Are Design Inputs, Not Obstacles

In a regulated advisory environment, data handling constraints and advisory boundary rules shaped every design decision. The mandatory validation checkpoint, the internal-use-only framing, and the anonymised-data-only testing protocol were not compromises — they were what made the solution workable in its operating environment.

Third: Systematic Observation Precedes Effective Intervention

The weeks spent on fieldwork and service blueprinting before any prompt was written produced the baseline that the entire solution was built on. Without that structured diagnosis, the tool would have addressed a presumed problem rather than an observed one. This reinforced the value of evidence-based practice over solution-first thinking.

SECTION 16: EMPLOYABILITY NARRATIVE AND PROFESSIONAL READINESS

This internship has developed a specific and defensible set of skills directly relevant to roles in financial services, management consulting, and business operations.

AI Workflow Design and Prompt Engineering

The ability to design, test, iterate, and document a structured multi-step AI prompt workflow — a competence that is increasingly valued across sectors and directly applicable to operational transformation roles in financial services.

Process Diagnosis and Service Blueprinting

Applied a graduate-level management framework to map a real operational process, identify the binding constraint, and design an intervention at the right point in the workflow — a transferable analytical capability.

Regulatory and Compliance Awareness

Operated in an AMFI-regulated environment and designed a solution that respects compliance boundaries — a practical skill that applies across financial services, consulting, and operations roles.

Stakeholder Communication

Demonstrated a prototype to a senior professional, received structured feedback, and incorporated it into product refinement — a core professional competency demonstrated in a real organisational context.

Evidence-Based Reporting

Documented the project with honesty about deployment limitations, data constraints, and what remains to be done. This is the professional standard for credible business reporting.

SECTION 17: IC REFERENCE SECTION

The Industry Connect deliverable for this internship is being submitted separately through the Case Study Route. The research question confirmed with the faculty mentor is:

"How can prompt-engineering reduce repetitive administrative effort in small-scale wealth advisory environments while maintaining compliance, advisor oversight, and client confidentiality?"

The IC case study is structured around the same five-part evidence chain documented in this report: organisational context, problem identification, solution design, deployment and response, and conditions for broader adoption. The proof bundle (Proof of Solution document) is attached as an annexure to the IC submission.
